Our CLOSED auction results data made available to you, so you can make more informed decisions! Register Now! Ready to Buy or Sell Takeuchi Tracked Skid Steer Loader? Join countless satisfied customers who helped us achieve 400,000+ successful equipment transactions in the last decade! Register Now! Sell Your Equipment! The TL8R2 is the latest addition to Takeuchi's fully redesigned track loader lineup setting yet another standard for performance, durability, serviceability, and operator comfort. The TL8R2's new undercarriage design features repositioned travel motors with internally routed drive lines and double and triple flange track rollers. This track loader comes standard with many new features like a 5.7" color multi-informational display with rearview camera, LED lighting package, and high-torque spin turn. In addition to these standard features, optional features available on the TL8R2 include creep mode, load sensing auto shift, and high flow auxiliary hydraulics. With all these new features, the TL8R2 is sure to prove itself as one of Takeuchi's most versatile and capable track loaders to date. Download Brochure Walkaround Video Machine Specs and Dimensions Machine Features Comparative Specs Financing Options Radial Lift Loader Design Excels in grading and dirt work Greater Bucket Breakout and Lift Arm Force Greeter Mid-Height Reech for Backfilling Heavy Duty Undercarriage Features repositioned travel motors with internally routed drive lines, double and triple flange track rollers that maintain at least two points of contact at all times making the machine less susceptible to detarking. Quiet ride track design greatly reduces noise and vibration improving ride quality. Delux Operator Station The 5.7" multifunction color display provides machine health and vitals while also allowing the operator to control a multitude of machine features and functions. Rear view camera adds peace of mind with real time view of the rear of the machine. Delux high back adjustable suspension reduces operator fatigue while providing greater visibility to the working equipment. A pressurized cab helps cut down on debris inside cabin and improves air quality. Takeuchi Fleet Management 2 Year Standard Service Minimize Downtime Remote Diagnostics Utilization Tracking Proactive Maintenance Control Costs Geofencing All Steel Construction Increases strength and rigidity while protecting vital engine and hydraulic components. Model specific undercarriage components with larger bearings result in slower shaft speed extending the life of the components. Ease of Maintenance Tilt up operator station, heavy duty rear door, and large lockable service hoods provide easy access to daily maintenance and service points Large side by side cooling module swings out to easily clean both sides of the radiator keeping the hydraulic system running cool and efficiently. Creep Mode (High Flow Models) Increases attachment versatility by matching travel speed to the requirement of the attachment 20 increments from .09 mph to 3.1 mph Load Sensing Two Speed Travel (High Flow Models) Maximizes efficiency by automatically shifting to low torque mode when more power is required As you were browsing something about your browser made us think you were a bot. The TL12R2 features a radial lift loader arrangement and sets another benchmark for compact track loaders by delivering one of the most capable and innovative machines available to the market today. The cab has been completely redesigned and enlarged and now features a smooth low-effort overhead door design for improved entry and egress. A quiet ride track design with flotation pads reduces vibration, noise levels, and improves ride quality. Rear View Camera adds peace of mind with real time view of the rear of the machine. Delux High Back Adjustable Suspension reduces operator fatigue while providing greater visibility to the work equipment. Pressurized Cab helps cut down on debris inside cabin improving air quality. Roll-up Door allows the machine to operate with the door open or closed regardless of loader arm position. Takeuchi Fleet Management 2 Year Standard Service Minimize Downtime Remote Diagnostics Utilization Tracking Proactive Maintenance Control Costs Geofencing Heavy Duty Undercarriage Features double and triple flange track rollers that maintain at least two points of contact at all times making the machine less susceptible to detarking. Quiet ride track design greatly reduces noise and vibration improving ride quality. Ease of Maintenance Tilt up operator station, heavy duty rear door and large lockable service hoods provide easy access to daily maintenance and service points. Large side by side cooling module swings out to easily clean both sides of the radiator keeping the hydraulic system running cool and efficiently. Auxiliary Hydraulic System 23 GPM standard with optional 40 GPM High-Flow system allows for maximum attachment versatility. High Capacity radiator and hydraulic oil cooler help maintain lower oil temperatures while running hydraulic attachments. Additional Guarding 1/2" Polycarbonate door and Level 2 Top Guard keep the operator protected from flying and falling debris. Heavy Duty Steel Door and integrated bumper help protect vital engine components. Hydraulically Driven Winch and bumper kit available for additional protection and added peace of mind in unstable soil conditions. With its impressive features and capabilities, this Takeuchi TL8R2 compact track loader is an excellent addition to any construction company or property maintenance operation. The TL8R2 boasts a robust undercarriage design with repositioned travel motors and internally routed drive lines, ensuring exceptional durability and performance. Okay, let's tackle this query. The user wants a paraphrased version of the provided article text using one of the three methods: SE, NNE, or IB. The key is to randomly select one method based on the 40%, 30%, and 30% probabilities. First, I need to check the original text. It's a product listing for a compact track loader, including specs, financing options, contact info, and more. The user provided examples of how each method should look. I'll start by determining which method to use. Since the probabilities are 40% SE, 30% NNE, 30% IB, I'll randomly pick one. Let's say I choose the Increase Burstiness (IB) method. The goal here is to vary sentence lengths and structures to make the text more dynamic. Looking at the original text, it's pretty dense with information. To apply IB, I'll break up long sentences, use more varied structures, and maybe add some descriptive phrases. For example, instead of listing specs in a single sentence, I can split them into shorter ones. Also, the financing options can be rephrased with different connectors. I need to ensure the meaning stays intact. For instance, the original mentions "HIGH FLOW auxiliary hydraulics (33 gpm)" - I should keep the key specs but maybe rephrase the sentence structure. Also, the contact information and URLs should remain accurate. Another thing is to check for any spelling errors if SE was chosen, but since I'm using IB, I'll focus on varying sentence structures. For example, changing "Operating Weight - Canopy 8,807 lb (3,995 kg)" to "Operating weight for the canopy is 8,807 lb (3,995 kg)." I also need to ensure that the rewritten text doesn't introduce ambiguity. For instance, the part about "whether you need this to enhance your construction company or if you need for property maintenance..." can be rephrased to "Whether you're looking to enhance your construction business or tackle property maintenance tasks like storm repairs or fire cleanup..." After making these changes, I'll review the text to ensure it's still clear and maintains the original intent. Then, format it with as specified. Finally, check for any markdown and ensure the response is clean and follows the user's instructions. **Compact Track Loader Specifications & Financing Options** The TL8R2 model, part of Takeuchi's redesigned track loader series, offers advanced features like a 5.7" color display, rearview camera, and high-torque spin turn. It includes standard elements such as LED lighting and a 5.7" multi-informational display. Optional upgrades include creep mode, load-sensing auto-shift, and high-flow hydraulics. **Key Specifications:** - **Engine:** Kubota V3307-CR-TE5B, 203.2 cu in (3331 cc), 74.3 hp (54.6 kW) - **Hydraulics:** 33.8 gpm (128.0 Lpm) high-flow auxiliary, 3,045 psi (21.0 MPa) system pressure - **Fuel:** 28.3 gal (107.0 L) tank, 2.8 gal/hr (10.6 L/hr) consumption at 65% load - **Hydraulic Reservoir:** 9.6 gal (36.5 L) capacity **Financing & Lease Options:** - **0% Financing (24 months):** \$3,055.57/month - **1.99% (36 months):** \$2,100.15/month - **Lease (60 months):** \$975.38/month + tax, option to purchase at \$28,423.62 - **Down Payment:** \$8,148.19 (subject to credit approval) **Why Invest?** Whether for construction, property maintenance, or storm repairs, a compact track loader is cost-effective for short-term projects or long-term improvements. Purchasing includes operator training and safety guidance. **Contact:** Call/Text Will Jenkel at (707) 494-0824 for Garton Tractor Santa Rosa. Visit [Takeuchi's website] for brochures or a demo video. **Additional Services:** - Skid steer & 3-point implements available - Equipment trailers, pallet forks, augers, and trenchers - Field service trucks for maintenance **Hablamos Español:** Sales, parts, and service available. **Note:** This unit is restricted to dealer sales areas. Secure availability by contacting Garton Tractor. **Quality Assurance:** Garton Tractor provides factory-trained service, parts delivery, and 12 stores in Northern California. **Visit:** 211 Cresco Ct, Santa Rosa, CA 95407 **Sand Box Demo:** Available for testing. --- *Financing requires equipment insurance. For details, contact Garton Tractor.*
